

LIGHTING THE HEATER (...continued)

- After about 30 seconds, when the safety cut-out device has heated up, the pilot valve button can be released.
- If the burner has not lit, wait for 1 minute before trying again from step 4 above.

STOPPING THE HEATER

- Turn the handwheel on the gas cylinder valve clockwise to the OFF position.
- Allow the heater to run on fan only for a few minutes until it has cooled down.
- Switch the fan off and unplug.

CHANGING THE GAS CYLINDER

- Turn the heater off by turning the handwheel on the cylinder valve fully clockwise to the OFF position.
- Wait until the flame has gone out completely. If the flame does not go out, call the hire company immediately.
- With the flame out, allow the heater to run on fan only for a few minutes to cool down.
- Ensure there are no naked flames nearby and the room is well ventilated.
- Switch the fan off. Unscrew the regulator connecting union using the correct spanner. The union has a left hand thread.
- Put the regulator assembly to one side, taking care not to damage the hose and union assembly.
- Take any plastic protective plug out of the valve on the new cylinder and save for refitting to the old cylinder.
- Check the valve connection on the new cylinder is the same as the one on the old cylinder and the threads are undamaged. If it is different do not try to fit the new cylinder. This could be very dangerous. Refit the old cylinder and contact the hire company.
- If the valve connections are the same, move the empty cylinder to a safe location. Position the new one to the side of the heater where it will be clear of the heat, but without straining the gas hose. Remember to take care - the new cylinder will be heavier than the empty one.
- Fit to the empty cylinder any plastic protective plug kept from the new cylinder.
- Check the threaded connection on the regulator is clean and undamaged. Carefully fit the connector by hand - it has a left hand thread. When the connector is threaded properly, do it up hand tight, then tighten fully using the correct spanner.
- If the cylinder connection does not appear to be gas tight, do not try to light the heater.
- Check the valve handwheel is turned fully clockwise to the OFF position. Contact the hire company immediately.
- If the heater does not work properly, do not try to repair or adjust it. Contact the hire company.

come into operation.
This allows the safety cut-out device to
continue to hold the pilot valve button until it clicks.
then push the ignition button until it clicks.
then allows the gas valve to open.

Press and hold the pilot valve button to speed
up the handwheel on the gas cylinder.
turn the handwheel on the gas cylinder
valve when starting it.

Switch the pilot valve button in front of the heater
that could catch fire. Do not lean over the
heater when starting it.

Check there is nothing in front of the heater
below the handwheel on the gas cylinder
before you turn it on and let it turn up to speed
up the handwheel on the gas cylinder.

because of the heat produced and air blast
occurred domestic premises or small room
produced by the heater is not suitable for use in
occupied premises or condensates all of the controls
also reduce the space to be heated will
reduce the amount of condensates or
condensates or very dangerous.
